BASIC NUTRITIONAL PANEL

DESCRIPTION

The Nutritional Panel includes a variety of tests that can help you determine if you are getting enough nutrition. This panel can also help rule out adrenal gland disorders and malnutrition. It is commonly ordered by doctors before surgery or for patients who are hospitalized or chronically ill.

The Nutritional Panel also includes a CBC, which measures important parameters of the cellular makeup of your blood that can reveal anemia, signs of infection or other factors that may cause fatigue; a CMP, which analyzes electrolytes, sugar, proteins, and enzymes including sodium, potassium, calcium, glucose and liver/ kidney function tests; and an Iron and Total Iron Binding Capacity – which measures the amount of iron in your blood.

WHY DO I NEED THIS TEST?

Are you getting the nutrients your body needs? Malnutrition can lead to a host of problems and this panel is a quick way to find out.

OTHER RELEVANT LAB TESTS

The Nutritional Panel gives a lot of good information, but while you're here, you might want to consider the Micronutrient Test, Annual Check-Up or Comprehensive Male Panel or the Comprehensive Female Panel.
