CARDIOVASCULAR PGX PANEL

DESCRIPTION

Patients taking medications for cardiovascular issues are often on a wide variety of drugs. These can include water pills, blood pressure meds, anti-blood clotting prescriptions, anti-arrhythmia agents and a variety of others. The report will help you and your healthcare provider determine the medication or medications that may be the most effective for you and carry the lowest risk for side effects. As just one example, one particular substitution that we test for occurs in 5% of the population but is associated with a 17-fold increased risk of muscle pain and damage.

WHY DO I NEED THIS TEST?

Genetic testing has potential benefits whether the results are positive or negative for a gene mutation. Test results can provide a sense of relief from uncertainty and help people make informed decisions about managing their health care. For example, a negative result can eliminate the need for unnecessary checkups and screening tests in some cases. A positive result can direct a person toward available prevention, monitoring, and treatment options. Some test results can also help people make decisions about having children

HOW LONG WILL IT TAKE TO GET MY LAB TEST RESULTS?

Test results generally takes between 5-7 business days after your sample has been received by the lab.

AM I REQUIRED TO FAST FOR THIS LAB TEST?

No, fasting is not required for this test.
