COMPREHENSIVE COMBINATION IgG ALLERGY PANELS I AND III

DESCRIPTION

The Comprehensive Combination Allergy Panel I and III measures IgG antibodies to 135 items including 90 Food Allergens and 45 Regional Environmental Allergens.

WHY DO I NEED THIS TEST?

Trying to identify the cause of chronic discomfort can be complicated when it doesn't seem linked to a specific food or substance, but an IgG Allergy test can help. Pinpointing specific foods, additives, or environmental substances that should be avoided can produce dramatic relief of uncomfortable symptoms.

Up to 50 million Americans, including millions of children, suffer from allergies. Allergies are a major cause of illness in the United States. IgG antibodies provide long-term resistance to infection and live longer in our systems than IgE antibodies. The only treatment for this type of allergy is to completely eliminate the allergen. Digestive problems may contribute to IgG allergies. Some people suffer from "leaky gut" in which food particles travel outside the intestines causing the body to react to a perceived threat and produce IgG antibodies. Over time the chronic allergic response can lead to a weakened immune system. Dietary and lifestyle changes to avoid the offending food or substance can help you feel better quickly.

AM I REQUIRED TO FAST FOR THIS PANEL OF LAB TESTS?

No. You are not required to fast for this test.

OTHER RELEVANT LAB TESTS

People who purchased the Comprehensive Combination Allergy Panel also considered the Basic Check Up or one of the Sensitivity and Intolerance tests to 50 Functional Foods or Medicinal Herbs or the Comprehensive Platinum Panel.
