HEPATITIS A TEST

DESCRIPTION

There are several types of hepatitis – each caused by a different hepatitis virus. The Hepatitis A Antibody (Total) Test will determine a prior Hepatitis A infection or an acute Hepatitis A infection.

Hepatitis is an inflammation of the liver that can be contracted through unprotected sex, using contaminated needles, or other causes.

Common Variations of Hepatitis:

- Hepatitis A can be caused by consuming contaminated water or food.
- Hepatitis B can be contracted through sharing contaminated needles, having unprotected sex, or being exposed to infected blood from another person.
- Hepatitis C can be spread by blood from contaminated needles during drug use or tattooing as well as by having unprotected sex.

WHY DO I NEED THIS TEST?

If left untreated, hepatitis can lead to fatigue or more serious issues like liver failure. What's most disturbing is how hepatitis can remain dormant in your body for years and cause no outward physical symptoms. It may be impossible to detect hepatitis with just a physical examination due to no noticeable symptoms.

HOW LONG WILL IT TAKE TO GET MY LAB TEST RESULTS?

Test results generally take between 24 to 72 business hours after your specimen is collected.

AM I REQUIRED TO FAST FOR THIS LAB TEST?

No. You are not required to fast for this test.

OTHER RELEVANT LAB TESTS

Customers typically purchase the Hepatitis Panel instead of just Hepatitis A because it tests for 3 variations of the hepatitis virus, not just one. Tests that go along with Hepatitis A (total) test include the Liver Function Panel (Hepatic Function) and the Annual Check-Up.
