

## **MATERNITY TEST- LEGAL**

### **HOW IS THIS TEST PERFORMED?**

The process is simple. Genetic material is obtained from both the child and the alleged mother via a soft swab on the inside of both cheeks. The DNA of the alleged mother is then analyzed to determine the probability that her genetic markers are also present in the child's DNA.

### **WHY MIGHT I HAVE THIS TEST DONE?**

This test is useful for people who are interested in determining the biological mother of a child. **These test results are legally admissible.**

If you are just looking for a Maternity Test that can provide answers and peace of mind, and you are not planning to use the results for any kind of legal purpose, check out the Informational Maternity Test (keep in mind that the results from the Informational Maternity Test are not legally admissible). However, if there is any chance that the results might be needed for legal reasons, then a Legal Maternity Test should be performed.

### **HOW ARE THE RESULTS REPORTED?**

The test results will reflect the probability of maternity.

A high probability of maternity indicates that the alleged mother is likely to be the biological mother.

A low probability of maternity may indicate that the alleged mother is not likely to be the biological mother.
