PSA (PROSTATE SPECIFIC ANTIGEN) TEST

DESCRIPTION

The PSA Test (or Prostate Specific Antigen) is a substance a man's prostate gland produces. This blood test will measure your PSA levels and if elevated, it may indicate prostate cancer or prostatitis (an enlarged prostate).

WHY DO I NEED THIS TEST?

No matter what age you are, all men need a PSA Test. Why? Because it's important to establish a PSA "baseline," so that you can, over time, monitor any changes in your PSA levels. A PSA is also recommended for men on testosterone therapy. Proactive blood testing like this can help you monitor your levels and possibly detect and treat disease before it's too late.

HOW LONG WILL IT TAKE TO GET MY LAB TEST RESULTS?

Test results generally take between 24 to 72 business hours after your specimen is collected.

AM I REQUIRED TO FAST FOR THIS LAB TEST?

No. You are not required to fast for this test.

OTHER RELEVANT LAB TESTS

Customers interested in their PSA levels have often upgraded to the Comprehensive Male Panel, the Male Cancer Screen and Tumor Marker Panel or the Male Health Profile.
